

BEST AVAILABLE COPYAmendments to the Specification:

Please replace paragraph 0008 with the following amended paragraph:

According to the claimed invention, a multiple-frequency antenna includes a circuit board
5 of dielectric material having a first surface and a second surface which is spaced apart
from and is substantially parallel to the first surface, a ground plane layer of electrically
conductive material covering a portion ~~of the~~ of the first surface of the circuit board, and a
feed-line of electrically conductive material disposed on the second surface of the circuit
board so as to extend over the ground plane layer. A first radiating element of electrically
10 conductive material is disposed on the circuit board and electrically connected to the
feed-line. A second radiating element of electrically conductive material is disposed on
the circuit board in close proximity to the first radiating element for coupling with the
first radiating element, the coupling providing an electromagnetic feed to the second
radiating element.
